

Our Science department plays an important role in the scientific age in which we live.

Amidst Bunsen burners and test tubes, scales and gauges, dead worms, frogs and pigs, plastic models of the human body and charts - students at Bells find excitement and adventure in seeing heretofore mysteries revealed to them in the classroom and lab.

General Science, biology, chemistry, and physics give students the foundation necessary to help prepare them for the Atomic Age. Through this department some students may become interested in making a career in Science.
