

# Academics in the New Millennium

# A C A D E M I C S

With advancement in genetic research and communications, learning in the twenty-first century and thereafter may take forms erstwhile imagined only in science fiction. For the present, however, computers are the technological innovation having the greatest impact on teaching. Educators are still in the nascent stages of determining the most efficacious ways to derive optimum benefit from computer use in the classroom. Camden Military Academy has a well-equipped computer laboratory and has been adding more computers each year in the library and in classrooms. Moreover, internet accessibility has been substantially increased. Yet, on the whole, computers are but one component in the curriculum-methodology mix. Small classes, highly qualified teachers, and monitored study halls, all proven ingredients, will remain at the core of the Academy educational approach; but we will continuously evaluate our curriculum and methods to determine the most effective ways to help our young men.

Having served as academic dean for fourteen years, LTC Kelly R. Schrader brings to that position the insight of an overall twenty years of experience at Camden Military Academy. He holds bachelor's and master's degrees from the University of South Carolina.
