

**So many ques-
tions, but so
little time**

QUESTIONS & ANSWERS

Investigating has existed in a diverse realm ranging from psychology to history. Within each of these different areas, there has existed a constant, unchanging variety of questions: who, what, when, where, why, and how. These questions have categorized the various interrogations and necessary explanations into one overall theme...investigating.

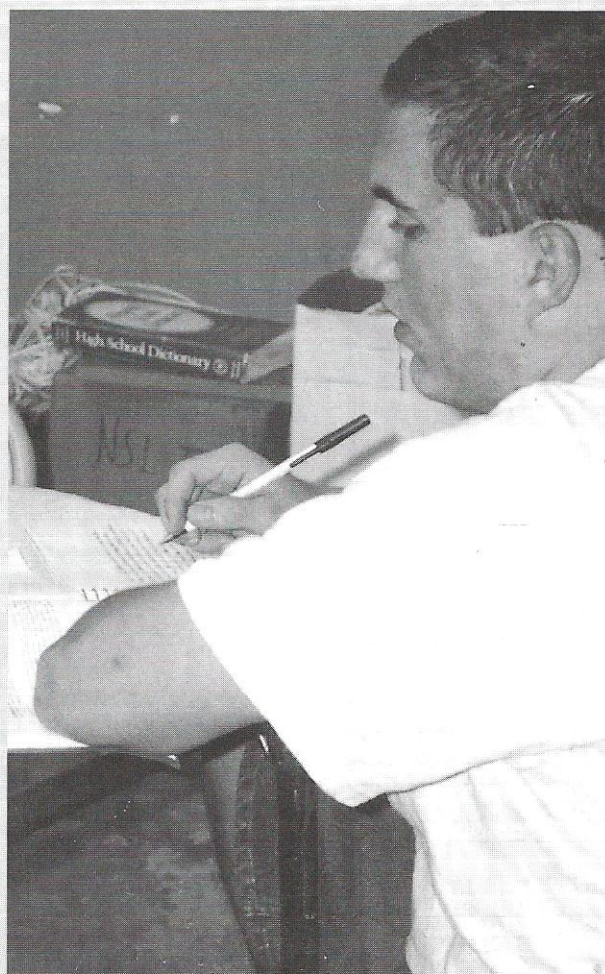

The mind could have been best explained through the field of psychology. "To investigate the mind, you have to get

personal information and analyze the results," junior **Jessica Benton** said. Research has been produced daily in the field of science. "Experimenting is not an easy thing to do when it comes to science," junior **Lamel Lynch** said.

Another stepping stone in the field of investigation consisted of a majority of research in the fields of English and Social Studies. Term papers and book reports, the inevitable projects students have always been required to complete, became the cornerstone of research in

the English, and occasionally in the Social Studies, department. "I like to research term papers because they give me more of a challenge," junior **Jessica Rahimi** said. In Social Studies, students focused on the cultures, religions, and history of different countries. "Social Studies is one of my favorite subjects. It is easy for me to research on that subject," sophomore **Brandi Traynham** said.

Investigating came in various areas of interest and different environments of employment.

So many words in such a big book. Junior **Jonathon Corpes** searches through a book to find information about a certain subject. The only disadvantage about looking up research in a book was all of the reading and writing.

Telling Time. While Freshman **Lakisha Thompson** is standing in the hall, Freshman **Jacob O'Quinn** stops for a quick look at the time. Not all of the clocks in the school are accurate, so students usually wear watches.
