

HEAT

In the school of Hospitality, Engineering, Agricultural Science and Technology many classes were offered such as those that involved students in hands on situations with the following subjects: construction, transportation, distribution and logistics, manufacturing, arts, A/V technology and communications, science, technology, engineering and mathematics. These classes prepared students for what their future would consist of if they chose this specific field. There was a large group of students that decided to take engineering classes. These students enjoyed being able to do plenty of hands on activities and get training before entering the real world. Being in these classes gave students the basic skills and knowledge they needed to know and get a decent head start on their careers.

Dandi Daniels

GUIDANCE COUNSELOR

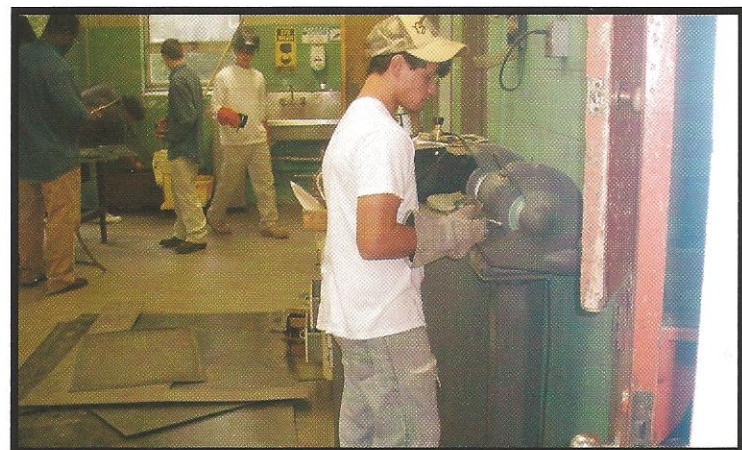

Liz Lipscomb

TOP LEFT Junior Dakota Crosby takes a break in the cafeteria while waiting to go back to TCTC. He stated, "I was inspired by my dad and my granddad to go into automotives."

BOTTOM LEFT Freshmen Joseph Thomas is doing some hands on activites in the classroom. When asked if he is learning a lot about agriculture, he responded, "Yes, because we have good teachers."

TOP RIGHT Sophomore Logan Hiers gathers soil to prepare for planting. After being asked what influenced her to go into agriculture, she replies, "My guidance counselor is the person who influenced me to go into this house."

ABOVE While working at the grinder in welding shop, sophomore Juan Hammond says, "I think this will benefit my future because I get hands on action of what I will be doing in my future."
