

"Art is so relaxing because we have projects instead of tests!" - Sophomore Tracy Rahn

1 Freshman Ashley Delong designs the cover of a cereal box for a classroom assignment. "Art Through Technology helps me to express myself," Ashley explained.

2 Freshman Damarias Moore laughs with friends during a break in her work. Damarias liked Art Through Technology because it's different than the typical art class.

3 Freshman Jasmine Randolph traces geometric figures while Mr. Childress gives instructions. "Since I plan to take Art II, I'm learning the skills I need in Art 1," Jasmine comments.

art

This has certainly been a productive year for all of the different art classes. In Art I, Mr. Childress' students learned their basic geometric figures, mixing colors, and learned how to realistically draw the human hand. Ms. Davis's Art II students used their former knowledge of colors to mix and apply their creativity while replicating famous paintings, as well as getting their hands dirty with clay. Ms. Langston's Art Through Technology classes, on the other hand, have been working diligently on more computer based artwork. They've designed advertisements and greeting cards using only a computer. Possibly the most fun part of Art Through Technology was learning how to do claymation. Students sculpted clay figures and made them appear to walk as they took multiple pictures after moving the figures. These art students certainly kept themselves very engaged with a multitude of projects, but the fun never seemed to end!
