

Health Careers Academy

THE FUTURE STARS OF HEALTH CARE

JUSTICE THROUGH EVIDENCE

Freshman Leah Rhodes says, "I really like HCA because it teaches us things in the medical field, and that's what I want to major in." Project-based learning in HCA reaches beyond the sciences to instruct students in all areas. Students in Ms. Vo's and Ms. Marianiello's classes present evidence in a mock trial in which they decided the fate of the individuals from the "Serial" podcast. Identifying facts to support an argument is key to a career in health science.

HCA, or the Health Careers Academy, New Tech associated program at CC Moving forward through its second year, the program continues its exploratory academic environment for students. HCA is health careers centered, project-based, collaborative experience that focuses on math and science to build skills toward becoming a health professional. The World Tour Project of HCA is a program that helps students get an idea of traveling with their health related careers. Opportunities abound in HCA!

SHARING THE LOVE

Students in Ms. Addington's Integrated Business Apps planned and executed a Valentine's day photobooth fundraiser to support those in need in the community.

COUGAR POETRY SLAM

Students in Ms. Upchurch's and Ms. Ryan's English 3/World History class perform poems during their World Studies Open Mic Event after reading the novel, *A Long Way Gone: Memories of a Boy Soldier*.

LEARNING INSIDE OUT

Hannah Biering (10th) & Lauren Demers (10th) made discoveries about human anatomy through comparative dissection in Ms. Robinson's Anatomy and Physiology class. Students use both hands-on and virtual dissection to understand how body systems sustain life in the HCA science courses taught by Ms. Brawley and Ms. Robinson.

WHITLEY WEATHERS (10TH) & AMAYA DUNTON (11TH) • JULI DUAR (10TH) & HAMADION THURMOND (10TH) • "SERIAL" MOCK TRIAL & MS. VO WITH HCA STUDENTS
