

Special Accomplishments

SSEP

Amber Avant, Bailey Crosby, Morgan Dandridge and Megan Dewitt are all smiles as they prepare to open their SSEP project, “Milk in Microgravity” along with their teachers Ann Henson and Carolyn Dalton. Their project had just returned to Earth after spending nearly one month at the International Space Station.

It is unclear if students at Colleton County Middle School will have another “out of this world” opportunity such as this one. One thing is for certain: Henson and Crosby both said they would be willing to enter the national contest again but for different reasons. Crosby enjoyed traveling to Washington, DC, this past summer and seeing students just like her from all over the country come together for their love of science. Henson would do it simply because it was such a phenomenal and life-changing experience for her students. The milk is now sour but it has left nothing but smiles on the faces of the young scientists and educators at Colleton County Middle School.
