

## FIELD TRIP '75

Lee Wimberley takes a hit of helium gas.

Spring, 1975: Mrs. Fowler and the biology classes, accompanied by "PH"

Spring, 1975: Mrs. Fowler and the biology classes, accompanied by "Photographer" Huffines, toured the Medical University in Charleston. On arrival, the group divided--half going with Mrs. Fowler, the others with Mr. Huffines. The two groups toured the dental department, where false teeth were being made; witnessed the implantation of electrodes in a cat's brain; were shown a film; were given a demonstration of the electron microscope; and were lectured by Dr. Metcalf, who also took them through the gross (boy! it sure was!) anatomy department and the morgue.

After examining a dissected cadaver, everyone was ready to eat and the bus headed for lunch at Burger King!
