

A Key To The Future

This year John C. began offering a full-year computer course. The students had a wide variety of programs which they ran on the computer to learn how to use it. They also had games that taught them other skills.

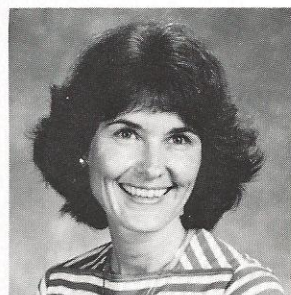

Computers are the key to the future. Once someone knows how to operate a computer he can get a job in almost any field. For example, today, many cars have computerized parts. Unless a mechanic knows how the computer works, he can't fix the car.

This is why it is important for high school graduates to have had a computer course. It is also necessary to take typing, because a computer is like a typewriter that prints on a screen instead of on paper.

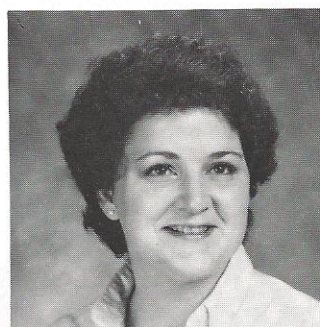

The lower and middle school students also learned about computers and how they are used.

Having the ability to type well is important to Karen Nettles. In the future she may be involved with activities that require typing.

The students at John C. love to work on the computer. During their spare time, they play computer games with their friends.

This was **Sharon Folk's** first year at John C. She divided her time between her students at USC-Salkehatchie and at John C. She taught Spanish I and II and French II. She was sponsor of the Foreign Language Club. She has visited Europe.

This was **Carol Free's** first year at John C. She came from Allendale Academy and attended Clemson University. She taught sixth, seventh, and eighth grade math and twelfth grade pre-calculus. She taught her students on their level by using everyday examples.

Betty Goehring's first year at John C. was full of responsibilities. She taught composition and psychology and was advisor to the War Hawk. She was also involved with the development of alumni affairs. She graduated from Queens College.
