

# EGG

# DROP

Mrs. Strickland's 8<sup>th</sup> grade classes had to make an egg catcher. We started out by writing in our journals our plans for building them. We wrote about how to build the egg catcher for about three days. After we finished the writing we started to build them. It had to be 6 inches tall and 12 inches wide. When we were done, we went outside and climbed to the top of a ladder to drop our eggs into the egg catcher. We had to test them to see if they worked. Mrs. Strickland graded us on how well we did and took pictures of the event.
