

# Fourth Graders Experience Changes

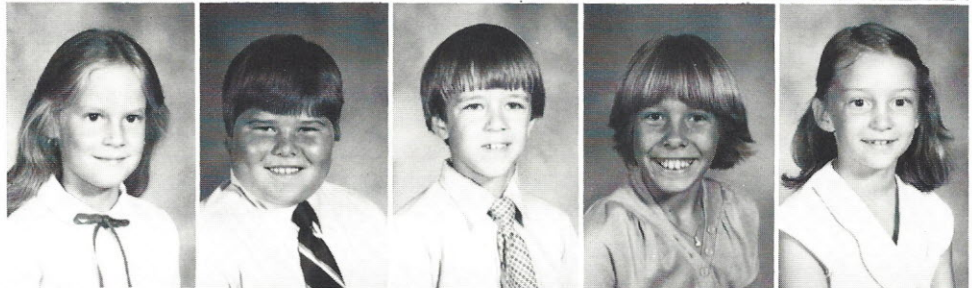

Fourth graders experienced some of the aspects of what is to come in Upper School by being introduced to subjects that were challenging. To further their education in science, the class made an annual field trip. Multiplication and division were prac-

ticed a great deal by taking speed tests to insure that the students learned their multiplication tables. The class also did many projects in the areas of science and history. Along with this came the new experience of doing book reports.
