Chairman Social Studies Department

SOCIAL STUDIES

An understanding of the past is a necessary component of the understanding of our present. Courses in United States and World history seek to fulfill this goal while civics and American government strive to make our students informed and interested citizens. World geography emphasizes the relationship of man and the earth in various parts of the world.

MATH

The ever-increasing complexity of our civilization makes it imperative that more people know more mathematics. The Mathematics Department realizes its responsibility in trying to help students meet this challenge. Courses offered by the department include general mathematics, algebra, geometry, and advanced mathematics. These are all modern courses.

Chairman Mathematics Department

Mrs. M. Lytchfield
Chairman Science Department

SCIENCE

As its long-range goal, the Science Department attempts to introduce the students to a systematic study of various fields of science, developing both practical skills and theory. The department includes courses in general science, in biology, and in physical science, which is a basic course for the further advanced studies in chemistry and physics.
