

## Biological Sciences Are Investigated

The purposes of the Biology Club are to organize students interested in biology so that they may pursue the study of biology outside the regular classroom and to inform the membership of current biological discoveries so that they may be better prepared for college biology course.

The Walterboro High School Biology Club had several projects during the year and were active participants in the March of Dimes. They were entertained by many guest speakers.

In December the Biology Club sent six representatives to the Teenage Workshop at the University of South Carolina. Sponsored by the physical education department of the University and by the South Carolina Heart Association, the workshop concerned the connection of diet, exercise, and smoking to heart disease.

What will we cut next?
