

Math Balances Theory And Practices

"If I tried, I did well—if I didn't—! ugh! I guess math just depends on puttin' my mind to it," stated a WHS student, Mike McDonald.

The mathematics department attempts to present the various math courses at a level which will permit all students to experience success and a feeling of achievement.

Math Department Chairperson Mrs. Ottie Allen stated, "We believe that one learns math by doing math, and a proper balance between theory and practice is essential for genuine understanding." The major goal of the math department was to help students to reason logically in mathematical and nonmathematical situations, acquire facility in applying concepts and skills in the affairs of today's world as well as to prepare them for careers as scientists or engineers.
