Homework and Tests Aren't as Bad as They Sound.

Because the days were short and the required work load heavy, it sometimes seemed as if our schedules revolved around homework. There were always papers to be written, tests to be studied for and assignments to be handed in. As freshmen soon realized what took some four years to learn, high school was serious business and was not to be taken lightly. Though it was serious it was also fun, and when attempted in a positive manner, it became "Good Old Golden Rule Days"—the song our parents spoke of.

Though some wanted the homework assignments, tests, and research to end, others begged for its stay, not wanting to give up the innocence of their school years, but wanting still to give their years **A Stamp of Approval.**

With a pencil in hand and an intense manner of concentration on his face, Mark Manigo establishes himself as a dedicated and enthused algebra student.
