

The Scientific Mind

Asking questions, looking for answers, building things, tearing things down; these things were all part of the scientific mind. The students in the chemistry and biology classes had a chance to put their interests into practice.

"Working in the lab was the most interesting part of chemis-

try." said Roderick Miley. Students were given the chance to conduct experiments and to just experiment. Besides lab work there were a lot of other things to do. Word problems were a major part of the course. Figuring out what formula to use and how to use it remained mystery to some people.

Biology students got their shot at lab also, but instead of mixing chemicals, they dissected frogs. Because some girls and guys could not bear the thought of killing an innocent frog, they got to dissect fish.

Whatever the case, those scientific minds were hard at work in all the science classes.
