

It's All In The Chemistry

Science Science Science

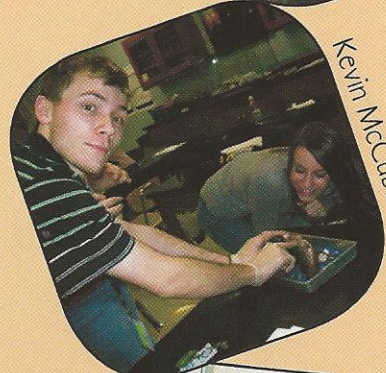

Alicia Garrett

Ms. A Finney-el

“Ew sick!” said one of the students about to dissect a fish. Science may be gross, but it’s the answer behind many of the questions of life. Science is an important subject for us to learn so that we can understand the evolution of life and physics. When asked students said the more the teachers do labs and experiments the more fun and easier it is to learn about the subject. So whether its playing with liquid nitrogen or dissecting rats students at CCHS are successfully learning about science.
