

If You Can't Do The Math nothing Adds Up!

Math Math Math Math Math Math

Sophomore Angela Garrett worked on a scale drawing project for her geometry class.

Logan O'Quinn

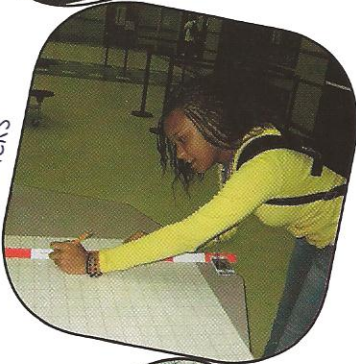

Math- (noun) a science (or group of related sciences) dealing with the logic of quantity and shape and arrangement.

That was the definition according to www.dictionary.com, but to students who had to go through the actual course; math's meaning was more like this:

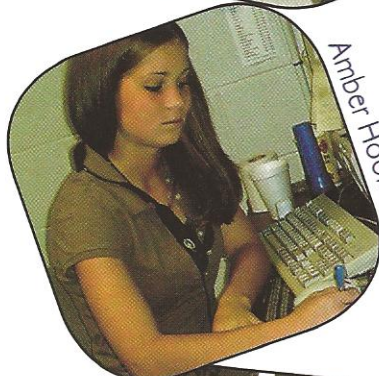

Math- (that class I had last semester) a boring (waste of time) class that I will never use again in my life after high school.

Although some of the students at CCHS may have been thinking math was useless, others, like sophomore Logan O'Quinn, thought otherwise. "I use math in my everyday life all the time...Like dealing with money and getting paid, I have to know how much I can spend!"

Working on his class work, senior Brandon Rivers looked through the book for help. "I don't think math is a waste of my time. You need to know basic math, at least, to survive, but other than that it depends on what your future job will be," Brandon said.

Senior Matthew Lyons did his math homework during lunch. "I like math because it has always come easy to me," Matthew said.
