

Seventh

Caught in the middle, ready to move on — but there are places to go, things to learn

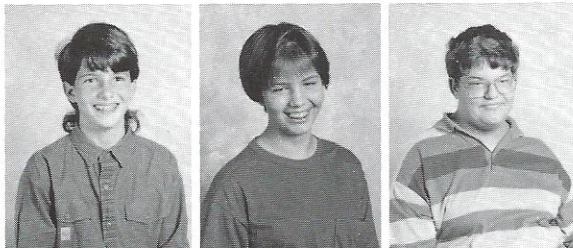

Aware that the total development of the student depended on involvement in a diversity of activities, many seventh graders participated in a variety of sports available. Good CPA citizenship was evident in the "Adopt a Shelf" program where each student accepted responsibility for keeping a certain library shelf orderly. Keeping a lighter touch, Mrs. Brittle, homeroom teacher, helped the students organize the Homecoming Skit and make the ornaments for the Christmas tree. Science lab seemed to be a favorite part of academics. Kimberly Gilmore declared, "Going to the lab provided an excellent opportunity to see science in action." As the year ended, the whirlwind of activities slowed and exams signified an end to an excellent year.

Seventh grader Regina Ackerman stands back and watches Michael Wood as he experiments with sound waves during Mrs. Hawes' General Science class.

"It was really comfortable in my nightshirt," Regina Ackerman said. "We all could stay in bed a few minutes longer and still get to school before the bell rang."
