

# We Don't Kill Bugs

What first comes to mind when hearing, "Science Club" . . . a bunch of students getting together to study science — no way! The annual canoe trip, highway pick-up, and the wildlife garden are just a few of the activities undertaken by these students. The Science Club, sponsored by Mrs. Hawes, has now been successful for two years.

The club went on its canoe trip in October. Everyone enjoyed the weekend camping, eating "primitive style," canoeing, having water fights, and being out in the wild. While paddling the Edisto, everyone seemed to be acquiring a number of spiders in their canoes. Finally, Dargan Rowe had had enough, so she decided to kill them, but Mrs. Hawes declared, "The Science Club doesn't kill bugs!" This has now become the Science Club motto.

The Science Club is busy even before school begins. A group of club members met in the wildlife garden to pull out weeds and prune trees. "It's a jungle out there! At first I thought pulling weeds would be no big deal, but I soon found out that I was wrong," said Tina Patel. Due to the club member's hard work and dedication, the garden is more pleasant and inviting to birds, as well as students seeking a quiet spot to study.

Ready, set, go . . . The Science Club members are rewarded for participating in the Adopt-a-Highway program with a fun-filled weekend.

What? Is this a lost civilization? No, it's just a group of Science Club members out in the wild. Ginger Speaks, Garnett Johnston, and Michael Stone quickly set up their tents, and decided to rest by the fire.
