Did you know that an arrow cannot move, or that Achilles could not overtake a tortoise in a foot race? These paradoxes, and other more serious questions were discussed vigorously by Webster's honor math students who comprised the Webster High chapter of Mu Alpha Theta, a national mathematics organization. Sponsored by Mr. George Brucker, the math club had an extremely successful initial year. Among its many activities was a tutoring service set up to aid other students who were having difficulty in mathematics. Proceeds from this tutoring went towards the purchase of books for a math library.

Also, several times during the year, the club visited Washington University for lectures by top math professors. Through such activities as these, Mu Alpha Theta fulfilled its purpose which was as stated by Mr. Brucker, to "promote the scholarship and the enjoyment and understanding of mathematics."

 Secretary Dave Elston

The Webster High A. V. O., under the capable guidance of Mr. Shrader and Mr. Ogle has spent a busy year giving their usual fine service to the school. The eighteen members gave up their study halls to perform their vital function of visual education for their classmates.

This year, new enthusiasm and resulting improvements have burst out in the A. V. O. The boys, using test equipment which they have built themselves, have begun to service all of their own equipment. When a projector or amplifier goes out of operation, Webster's own electronics experts take over, instead of sending the machine elsewhere for repairs as was done previously.

In the words of Mr. Shrader, "Any boy who has a sincere interest in electronics and is serious about his work, can learn a good deal from A. V. O."
