

**Measuring it out.** Being extremely careful with his measurements, junior **Wade Steagul** concentrates on making everything in his vocational class the best he can. "In regular classes, I am not usually that careful. I really enjoy this class because it prepares me for my future, and I am interested in the subject," Wade said.

**Learning the basics.** During her Drafting class, junior **Heather Cooper** listens intently as Mr. Kubik shows her how to do her work. "I really enjoyed my class at the vocational center. I definitely want to take another class over there. The teachers taught me a lot more because of the hands on experience," she said.

**Laying 'em down.** In the masonry class at the vocational center, students work hard to learn how to place the bricks where they need to go. The masonry class prepared the students for entering a field that would prepare them for building structures. This class involved some of the most hands-on interactions.

**Working hard.** According to students, taking written tests in Welding 1 is one of the less exciting moments of the class. "I love welding because it is so hands on, and it is so much more exciting than the rest of my classes. I always look forward to that part of the day," sophomore **Christopher McDonald** said.
